Zero-Queue Campus Meal Pre-Ordering

Skip the line, save your time

THE 15-MINUTE RUSH HOUR PROBLEM

LOCATION FOCUS: RSU CANTEEN BUILDING

CORE PROBLEM: STUDENTS HAVE ONLY 15 MINUTES BETWEEN BACK-TO-BACK CLASSES, BUT PEAK LUNCH QUEUES TAKE 20-25 MINUTES.

CONSEQUENCES: STUDENTS SKIP MEALS, RUN LATE TO EXAMS, OR VENDORS LOSE POTENTIAL REVENUE DUE TO QUEUE ABANDONMENTS

PRODUCT ARCHITECTURE & USER JOURNEY

- **Student Pathway:** Search/Filter (FR-o6) -> Customization Drawer (FR-o7) -> Basket Checkout (FR-o3) -> Real-Time Status Stepper (FR-o8).
- **Vendor Operations:** Live kitchen queue (FR-O5) with masked student contact numbers (O81-XXX-XX89) for PII privacy compliance (FR-15).

HOW FOODFAST OPERATES & SCALES

QR code poster placements on classroom doors, campus LINE Official accounts, and Instagram student campaigns

Monetization:

- \$5 campus convenience fee per pre-order paid by students.
- 5% commission tier or featured stall placement for vendors.

FastFood

BUILT ON SOLID IT
FOUNDATIONS

QR code poster placements on classroom doors, campus LINE Official accounts, and Instagram student campaigns

- **Full Traceability:** Every feature directly traces back to initial user stories and system requirements.
- **Data Architecture:** Lightweight LocalStorage persistence engine enabling zero backend latency for local prototype testing.
- **Open Source Repo:** Transparent GitHub repository structure with verified member contributions.
